## Enhanced Risk Graph for Automotive Hazard Analysis

- ✓ Option to distinguish hazardous from rare events in the ISO 26262 risk assessment
- ✓ Build consistency checks into your analysis that focus on the relevant driving situations
- ✓ Refine your risk management

## Next Level Evolution of Fault Tree Analysis

- ✓ Compute the Mean Time To Failure (MTTF) and Mean Time Between Failure (MTBF) for complex systems
- ✓ Benefit from unique Component Fault Tree modelling support to structure and reuse faulty behaviour
- ✓ Leverage the uniform identifier handling for failure modes and malfunctions at events in FTA

## Extensions to RMS and SysML Tool Connectors

- ✓ Configure the requirements exchange inline with corporate policies for retention and deletion
- ✓ Gain confidence and control in requirements exchange by new reporting and logging enhancements
- ✓ Get more model data into medini via extended SysML model importers

FTA : Fault Tree Analysis  
 CFT : Component Fault Trees  
 RMS : Requirement Management System

# Product Release Detail

# ANSYS medini analyze – Technical Highlights in 2023 R1

## Automotive ISO 26262, SOTIF

- **Glossary Support:** Manage terms in a glossary for the project
- **ASIL None:** Option for the HARA to receive a *None* as ASIL for CO/EO/SO hazardous events (instead of QM)

## A&D Safety ARP4761, MIL-STD-882E

- **MTTF and MTBF:** Computation of Mean times to and between failures for FTA and RBD
- **Component Fault Trees (CFT):** Integrated component fault trees editing in SysML and evaluation support [BETA]

## Join the Field Testing: Collaboration Server

- **Centralized project portal:** Manage projects and versions at a central location with users and access rights
- **Live collaboration:** connect multiple users to the same project and support live collaborative editing

## Join the Field Testing: Digital Safety Manager

- **DSM Web App:** centralized project planning, monitoring, validation, and KPIs via pure web browser application

## Common Functionality

- **Failure mode IDs:** Support for auto-counters at failure mode IDs and take-over into FTA events
- **FTA fold-out subtree** provides an option to stop at a certain level
- **Extensions to SysML model importers** from Cameo, Rhapsody, Enterprise Architect (EA)
- **ALM adapter improvements** for deletion and diff/merge
- **M2Doc** is available as new reporting technology

# 2023 R1: ASIL None Risk Graph Enhancement

## What's New

- ISO 26262 risk graph has a new option to rank E0/C0/S0 hazardous events as *None* (no ASIL)
- None is a new literal that can distinguish potentially hazardous entries ranked as QM from irrelevant ones
- Backwards compatibility of risk graph via option

|    |    | C0   | C1   | C2   | C3   |
|----|----|------|------|------|------|

|    | E2 | None | QM   | QM   | QM   |
|    | E3 | None | QM   | QM   | A    |
|    | E4 | None | QM   | A    | B    |
| S2 | E0 | None | None | None | None |
|    | E1 | None | QM   | QM   | QM   |
|    | E2 | None | QM   | QM   | A    |
|    | E3 | None | QM   | A    | B    |
|    | E4 | None | A    | B    | C    |
| S3 | E0 | None | None | None | None |
|    | E1 | None | QM   | QM   | A    |
|    | E2 | None | QM   | A    | B    |
|    | E3 | None | A    | B    | C    |
|    | E4 | None | B    | C    | D    |

## User Benefits

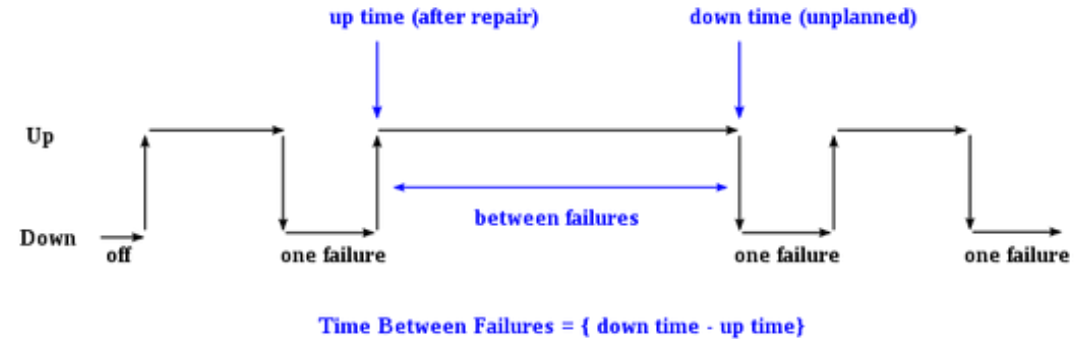

- Flexible choice how to document non-hazardous entries
- Explicit visualization of incredible/controllable/safe analysis entries

|        |   |    |            |    |  |    |  |      |
|--------|---|----|------------|----|--|----|--|------|
| HE-051 | crash into other vehicle, leaving road    | S3 | high speed | E4 | General: Changing lanes                            | C3 | distance to other vehicles, small road, braking not sufficient | D    |
| HE-052 | crash into structure                      | S1 | low speed  | E2 | Stopped in entrance/exit of parking structure      | C2 | distance to structure  | QM   |
| HE-064 | crash into other vehicles or leaving road | S3 | high speed | E3 | General driving on country road with narrow curves | C3 | distance to other vehicles, small road, braking not sufficient | C    |
| HE-199 | no harm to a person                       | S0 | no harm    | E4 | General: stopped car                               | C0 | as no risk is involved   | None |

# 2023 R1: Mean Time to Failure Extensions

## What's New

- Mean Time To Failure (MTTF) computation for system modelled via FTA and RBD
- Mean Time Between Failure (MTBF) computation in addition for repairable systems
- Effective MTBF for systems with scheduled maintenance and small relative repair time

## User Benefits

- Computation of additional key measurements for system reliability analysis
- Widespread usage in Defense, Industrial, and Telecommunication industry sectors

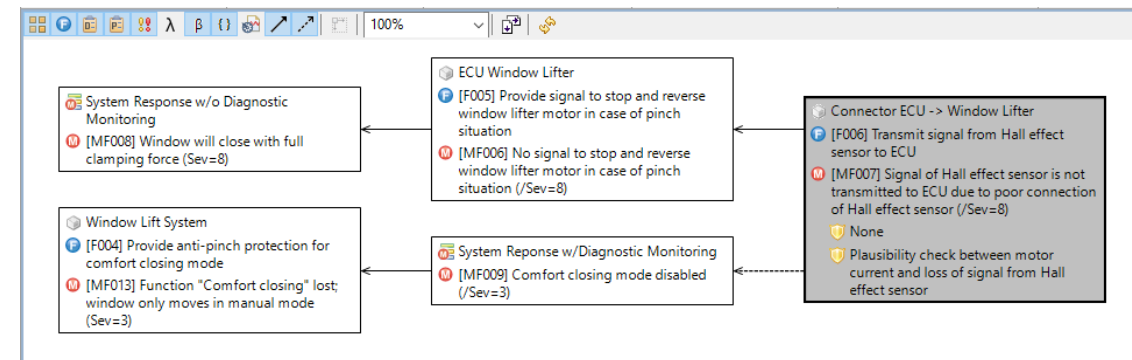

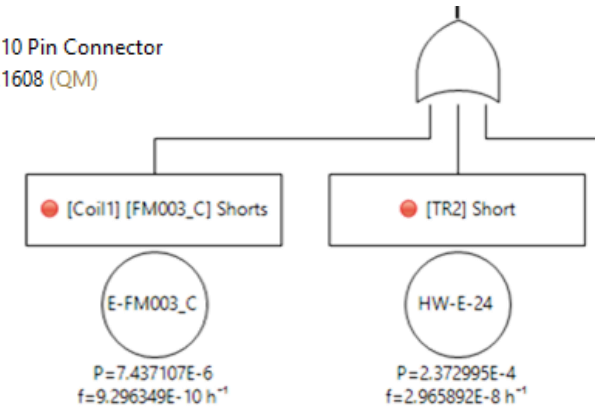

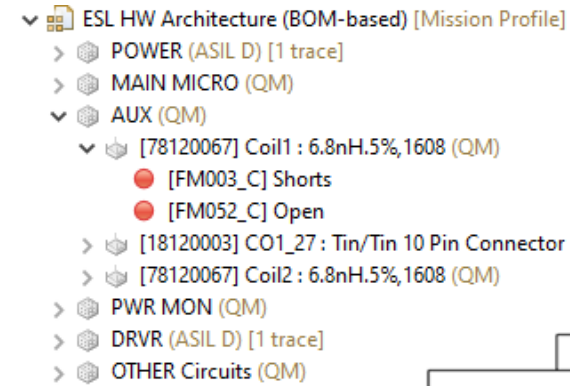

# 2023 R1: Failure Mode and FTA Enhancements

## What's New

- Auto-counter for failure mode IDs to automatically assign IDs
- Consistent derivation of FTA Event identifiers from failure IDs (malfunction/failure mode/hazards)
- Restore FTA subtree up to level N
- Improved visualization of mitigated failure effects

## User Benefits

- Easier traceability and consistency of failures in design and analyses
- Reduces effort to manage failure/event identifiers
- Increased usability in model handling and navigation

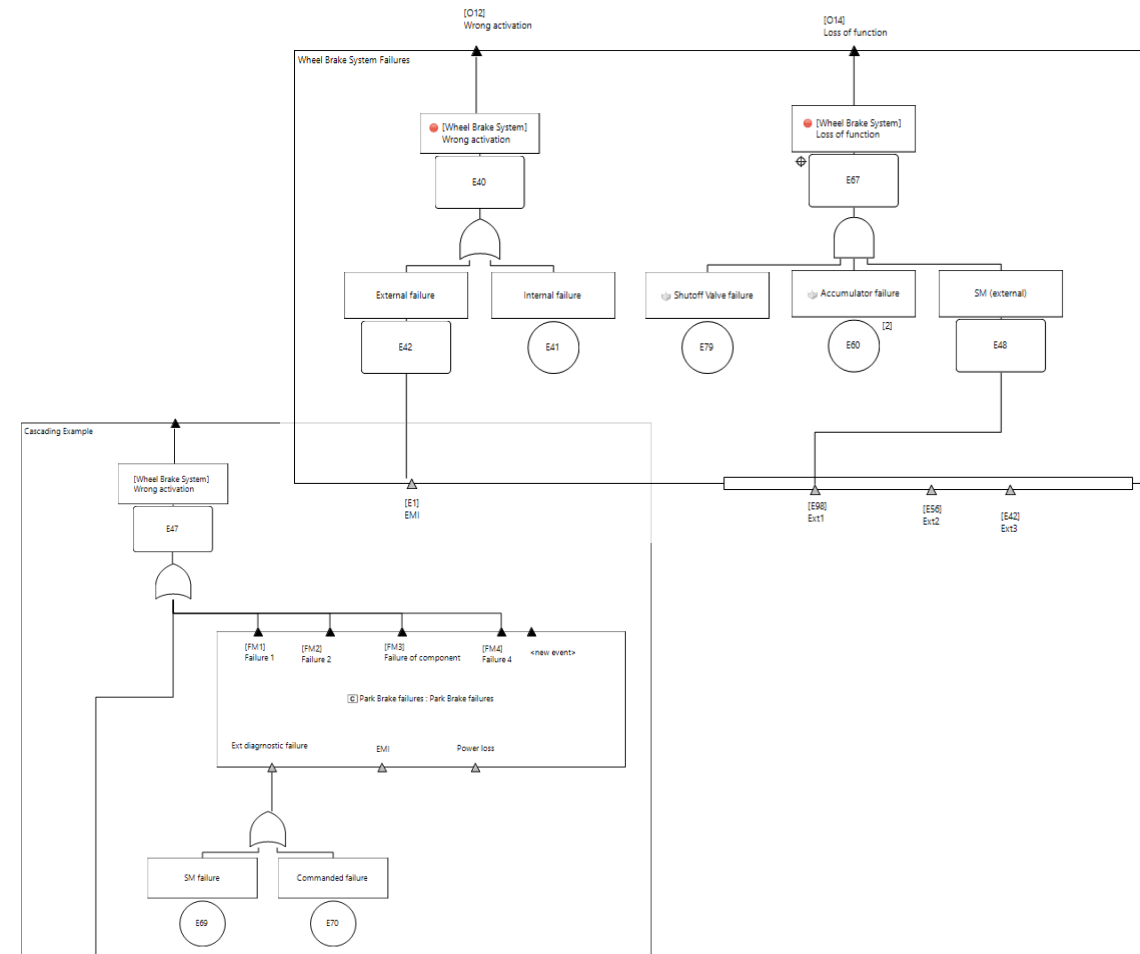

# 2023 R1: Component Fault Trees (CFT) – Beta

## What's New

- CFTs are now integrated in the standard release cycle with probabilistic and diff/merge support
- Major extension of classical fault trees by component concept (definition and usage)
- Definition of failure logic by fault trees embedded into SysML parts
- Consistent usage of CFT by means of “complex events” referencing component definitions

## User Benefits

- Increase of structuring large fault trees by component concept
- Reuse of fault tree by sharing of fault logic together with models/libraries

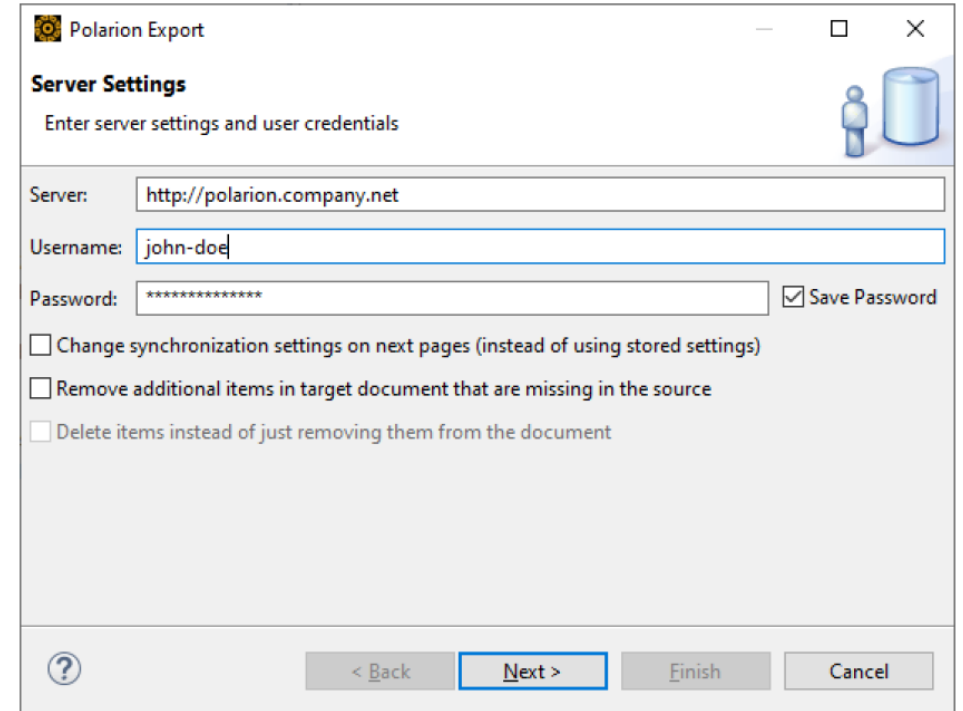

# 2023 R1: ALM/PLM Tool Connector Improvements

## What's New

- Consistent deletion of requirements during exchange with requirements management systems
- Diff/Merge using external identifiers for better teamwork on parallel branches
- Improvements to error handling and logging when exchanging requirements

## User Benefits

- Easier roundtrip between requirements tools and Ansys medini analyze
- Diff/Merge enables teams to maximize parallel activities when exchanging requirements

The screenshot shows a dialog box titled "Polarion Export" with a "Server Settings" section. The subtitle reads "Enter server settings and user credentials". The dialog contains the following fields and options:

- Server:** A text box containing "http://polarion.company.net".
- Username:** A text box containing "john-doe".
- Password:** A text box containing "\*\*\*\*\*" with a "Save Password" checkbox checked to its right.
- Change synchronization settings on next pages (instead of using stored settings)
- Remove additional items in target document that are missing in the source
- Delete items instead of just removing them from the document

At the bottom of the dialog, there is a help icon (question mark), a "< Back" button, a "Next >" button (highlighted with a blue border), an "Finish" button, and a "Cancel" button.

The Ansys logo is positioned on the left side of the slide. It features a yellow slanted bar to the left of the word "Ansys" in a bold, black, sans-serif font.

**Ansys**
